2007-2009 American Community Survey 3-Year Estimates

NOTE. Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

For information on confidentiality protection, sampling error, nonsampling error, and definitions, see Survey Methodology.

	Indiana	
	Estimate	Margin of Error
Total:	6,385,845	*****
Not Hispanic or Latino	6,049,152	+/-457
Hispanic or Latino:	336,693	+/-457
Mexican	259,863	+/-3,469
Puerto Rican	28,101	+/-1,927
Cuban	4,472	+/-895
Dominican (Dominican Republic)	1,816	+/-564
Central American:	18,958	+/-2,524
Costa Rican	535	+/-319
Guatemalan	5,538	+/-1,119
Honduran	4,905	+/-1,303
Nicaraguan	1,285	+/-583
Panamanian	900	+/-287
Salvadoran	5,751	+/-1,629
Other Central American	44	+/-70
South American:	8,942	+/-1,304
Argentinean	825	+/-361
Bolivian	208	+/-176
Chilean	374	+/-195
Colombian	3,034	+/-768
Ecuadorian	1,183	+/-546
Paraguayan	61	+/-65
Peruvian	1,729	+/-561
Uruguayan	132	+/-123
Venezuelan	1,334	+/-529
Other South American	62	+/-72
Other Hispanic or Latino:	14,541	+/-1,522
Spaniard	2,538	+/-662
Spanish	2,907	+/-681
Spanish American	130	+/-103
All other Hispanic or Latino	8,966	+/-1,018

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2007-2009 American Community Survey (ACS) data generally reflect the November 2008 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
