2007-2009 American Community Survey 3-Year Estimates

NOTE. Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

For information on confidentiality protection, sampling error, nonsampling error, and definitions, see Survey Methodology.

	North Carolina	
	Estimate	Margin of Error
Total:	9,230,696	*****
Not Hispanic or Latino	8,552,464	+/-849
Hispanic or Latino:	678,232	+/-849
Mexican	433,615	+/-6,948
Puerto Rican	55,032	+/-3,678
Cuban	13,896	+/-1,831
Dominican (Dominican Republic)	11,907	+/-2,052
Central American:	95,769	+/-5,057
Costa Rican	5,260	+/-1,313
Guatemalan	19,065	+/-2,680
Honduran	27,761	+/-3,283
Nicaraguan	4,449	+/-1,218
Panamanian	4,430	+/-961
Salvadoran	34,119	+/-3,572
Other Central American	685	+/-344
South American:	40,414	+/-3,549
Argentinean	3,030	+/-720
Bolivian	774	+/-374
Chilean	2,470	+/-814
Colombian	13,795	+/-1,789
Ecuadorian	7,364	+/-1,569
Paraguayan	250	+/-177
Peruvian	6,664	+/-1,225
Uruguayan	930	+/-616
Venezuelan	4,573	+/-1,062
Other South American	564	+/-372
Other Hispanic or Latino:	27,599	+/-2,569
Spaniard	7,063	+/-1,352
Spanish	3,224	+/-956
Spanish American	309	+/-235
All other Hispanic or Latino	17,003	+/-2,094

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2007-2009 American Community Survey (ACS) data generally reflect the November 2008 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
